

2019-NCOV POSTER

7 BWYA SLOS

GROUP MEMBERS: G7Y JAMES, FRANK, RUNQI, ANDY

ADAPTABILITY & RESILIENCE - JAMES

I think for me the 2019-nCoV has the most connections to resilience and adaptability in the seven BWYA SLOs. This situation is really different to the time we can go outside and play freely. During these difficult times, we need to use the skills of resilience and adaptability to change ourselves and adapt to this new situation as quickly as possible. For example, you should stay in your home if you can, but if you need to go out, then you must wear your masks and other protections. Also, you need to wash your hands oftenly, do more exercise, sleep and rest well, get warm and so on. Time is precious, life is precious, so we need to have adaptability and resilience to make our days enrichful and not wasting every day.

FAIRNESS & CARING - FRANK

Fairness is mainly about how doctor and nurse treat the patients. They may be biased, the attitude to patients may depend on their age, racial, where they from or whether they are wealthy or not. This is not fair, and every single patient should get an equal and fair treatment. The relationship between doctor, nurse is mainly about caring. Their job is to take care of the patients. Not just them, but caring is now about everyone. We pay our care to the patients, heroes like doctor and nurse fighting virus at the first line, and also to the people that support them for so long. The Workers building Wuhan Vulcan mountain hospital and lightning mountain hospital, the soldiers that have been disposed to help...

RESPECT & INTERNATIONAL-MINDEDNESS - RUNQI

For respect, we need to respect the people who still work in this special time such as nurse, doctor, cleaner, courier, or staffs in supermarkets. We can show our respect to them when they do the service for us. For example, I will always say "thank you very much" when I get the delivery goods from couriers. For international-mindedness, the influence of this event is international. The virus spread to other countries quickly. Many countries stop the flight airline to China. The economic influence is also international. Some Europe or American factories cannot work because they lack the materials from China. At the same time China gets the helps from international organizations. China gets donations from many countries and many scientists from all over the world work hard to produce the medicine to treat the patients.

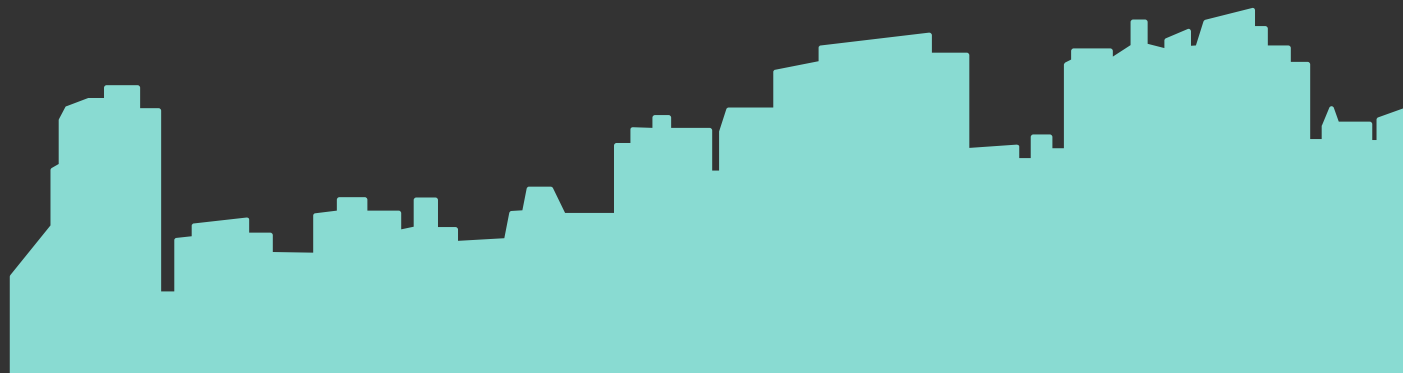

KNOWLEDGE - ANDY

Knowledge is fairly important in all scenarios. Knowledge is the key to being able to ask questions and learn them, which eventually suggests for you to master them, they can also make you think things or do things in a rational way, making you being sure and fully responsible for you decisions. Knowledge is also extremely useful when you want to and under such circumstances today, being knowledgeable can help you prevent a lot of disease, like the modern coronavirus. If you are knowledgeable, you will go onto the website, or ask your family members for how to prevent from getting this virus, this action could firstly help yourself, also it could convenience the country a lot less effort, and hopefully we might find a vaccine. All the evidences above can suggest that being knowledgeable is contributive.

GO
CHINA!

GO
WUHAN!
